ca punar jatih we should note that our reconstructed text here (from end of
119v6 to beginning of 120r1) has many more aksaras than the gap would allow
for. because our reconstructed text almost certainly must represent something
close to the original text, we have supposed that the scribe's eye in all
likelihood skipped from the first yathabhutasyabhi- which would have
concluded 119v6 down to -samaya udapadi which would have begun 120r1. the
reconstructed text is based upon hoernle no.149.x.33 [= or.15009/670] v1 4 and
sht 154.

also sht 152, fragment ev2 3. the end of the canonical text is missing from the

2r1, sht 157, fragment br4 5, 167r6 v2, 179r5 v2, and 616v3 4; cf. also the

ii. appendix the first part of the appendix has been adapted from the petrovsky
ms which is the only extant ms that preserves, almost entirely, that part of
the appendix not found in the pelliott/stein ms. because our reconstruction of
the canonical text and appendix is intended to represent a single ms tradition
(as reunited from the london and paris collections), the section of the
petrovsky ms that has been used to reconstruct the appendix has been given in

bold. the paragraphing is more or less arbitrary.
