

The Bahá'í Philosophy of Human Nature

Exported from Holy-Writings.com on 2026-06-20 — 1 clipping

The Bahá'í philosophy of human nature, according to him, is inescapable for individuals and societies. Such theories are present whether they are held consciously or unconsciously in the mind, communicated explicitly or implicitly in a text, expressed in traditional customs and folktales, or embedded in religious beliefs and ceremonies. They may be embryonic or fully developed. At the beginning of *The Blank Slate: The Modern Denial of Human Nature*, cognitive scientist and philosopher Steven Pinker asserts that Augustine's *The City of God*, and Marx's *The Communist Manifesto*. However [e]veryone has a theory of human nature. Everyone has to anticipate the behavior of others, and that means we all need theories about what makes people tick. A tacit theory of human nature—that behavior is caused by thoughts and feelings—is embedded in the way we think about people. . . . Rival theories of human nature are entwined in different ways of life and different political systems, and have been the source of much conflict over the course of history. (1; emphasis added) For millennia, the major theories of human nature have come from religion... every society must operate

They may be embodied in myths and legends or expressed in philosophic treatises such as Plato's *Republic*, Marx's *The Communist Manifesto*. However [e]veryone has a theory of human nature. Everyone has to anticipate the behavior of others, and that means we all need theories about what makes people tick. A tacit theory of human nature—that behavior is caused by thoughts and feelings—is embedded in the way we think about people. . . . Rival theories of human nature are entwined in different ways of life and different political systems, and have been the source of much conflict over the course of history. (1; emphasis added) For millennia, the major theories of human nature have come from religion... every society must operate

they may be couched, these theories tell us what to expect from people in regards to such vital issues as aggression, or even outright violence, helpfulness, reliability, good will, and integrity. Beyond these, philosophies of human nature consider meta-issues related to human nature such as, for example, the role of intrinsic nature and extrinsic nurture, the different kinds of needs shared by all humans,¹ personal and collective psychopathology,² and the degree of universality of mankind's physical and mental constitution. Philosophies of human purpose of life in this world and the next, mankind's relationship to the supernatural or nonmaterial world, and

with a theory of human nature. (3; emphasis added) the role, if any, of messengers and prophets. Finally, they set the basis for morality by providing a standard for deciding which behaviors we can A "theory of human nature," as Pinker conceives it, refers to the intrinsic or "natural" ways of thinking, feeling, and acting that distinguish human beings from other forms of life and, Societies.

8 The Journal of Bahá'í Studies 27.1-2 2017

expect from all humans, which can be considered natural for the kind of beings we are, which are acceptable, and which are not. therefore, that human nature is shaped by the environment and concludes, that we must overthrow all the old social structures in order to create a new kind of human being.⁵ Human environmentalism—the belief that it is possible to shape human beings any way we like by controlling the nature or essence. Is what we call kind of "human nature" the product of environmental influences, a set of innate attributes and potentials, or a mixture of both? The terms of this controversy have been most famously formulated by John Locke, who maintains that the human mind has no inherent ideas, and attributes, capacities, tendencies, or potentials—a view that is now known as the tabula rasa or "blank slate" theory (2.1.2).³ According to this notion, everything in the mind is added after birth by worldly experience and the tabula that human nature is shaped by the environment and concludes, that we must overthrow all the old social structures in order to create a new kind of human being.⁵ Human environmentalism—the belief that it is possible to shape human beings any way we like by controlling the experiences people have—was an idea promulgated most famously by B. F. Skinner and other behavioral psychologists. Perhaps one of the most striking results of Locke's "blank state" theory is the claim that sexual identity is not intrinsically constrained determined by biology but is, a matter of preference because there is no particular human nature to our choices. Two globally influential modern philosophers reinforced Locke's

education provided by others. Locke's thinking. theory suggests that because human beings are shaped entirely by their environment, the "perfectibility of man" is contingent on the manipulation of the social environment. This idea was taken up by others, among them Jean-Jacques Rousseau, who popularized the idea that human nature can be improved by strictly natural, non-religious means.⁴ Marxism also holds rejected genetics and natural selection and claimed 3 Locke actually uses the term "white paper." This idea was already present in Aristotle (De Anima, 429b29–430a1). See other words, also Stoic philosophy and, in the eleventh century CE, Ibn Sina. genetics—a belief 4 See Rousseau's A Dissertation on the Origin and Foundation of the Inequality of Mankind. shaping. The Bahá'í Philosophy of Human Nature receive or accept" (518–19). There is no "pre-made" human nature (or any other nature); there are only individuals and groups making themselves. Elsewhere,

rasa doctrine and this line of One was the atheist existentialist Paul Sartre, who elaborated his most famously in Being and Nothingness. In this work, he observes, have seen, for human reality, to choose oneself; nothing comes from the outside or from within which 5 In Soviet Russia, this to Lysenkoism, a belief that a plant like rye could be transformed into wheat if raised in the proper environment and treated appropriately. In other words, the nature of rye was determined by its environment and not by belief echoed in today's denial of nature and the view that environment is the only relevant factor in its shaping.

9

powerful and widespread es, as can be seen in current and legal battles over sexual identity and, on a larger

scale, in Sartre states, "For if, indeed, existence precedes essence, one will never be able to explain one's actions by reference to a given and specific human nature; in other words, there is no determinism—man is free, man is freedom... We are left alone, without excuse. That is what I mean when I say that man is condemned to be free" ("Existentialism" 295; emphasis added).⁶ all, economist Michel Foucault, one of the premier postmodernists, concurred with Sartre. He explains that he is "suspicious of the notion of liberation" because "it runs the risk of falling back on the idea that there exists a human nature diametrically opposite to the one that somehow exists "apart" from us Socialism, and that we can rediscover and regain (76). He rejects the existence of any First, such essence or nature: "behind things Comte de [there is] not a timeless essential secret but the secret that they have no essence" (353). Sartre, Foucault, and Europe-

the history of the twentieth century. The Russian Revolution of 1917 was an attempt at creating a new society by remaking human nature into "New Soviet Man" (Bauer et al. Communist efforts were based on two principles—that human nature is almost infinitely malleable and humans are entirely shaped by their natural, social, and, above all, economic environments. There is no pre-determined human nature to overcome. On 22 June 1941,⁷ the materialist and radical philosophy of human nature itself at war with its opposite, German National Socialism, whose philosophy of human nature combined three main principles. First, it accepted Joseph Arthur, Comte de Gobineau's belief that race is a determining factor in history and that Aryans—white and mostly

their followers assert that any concept of human nature is intrinsically tyrannical and dangerous because it marginalizes and oppresses whoever does not fit into the parameters of its ultimately un- definition of human ontology. Beliefs about human nature have 7 The official launch date of "Opera- 6 Unfortunately, Sartre's view is un- determined by the observation that if, unlike other creatures, a human is "condemned to be free," then, in effect, s/he has a particular identifiable nature with at least one unique attribute.

too,

to "the essence of all created things" and to "the inmost essence of all things" (Kitáb-i-Íqán 29,30) both of which include nature. Indeed, God the Creator has an essence, as indicated by Bahá'u'lláh's allusion to His "Divine Essence" as well as Bahá'u'lláh's description of Himself as its "Manifestation" as

"essence" as
tation" (Gleanings 13:2; 'Abdu'l-Bahá, indication of

Some Answered Questions 53:3).²²
times

In this connection, the Bahá'í Writings inform us that the essences of things cannot be known directly in attributes, themselves (being essentially metaphysical) but can only be known indirectly via their attributes or qualities: God's—has

two kinds of attributes: essential or the inner essence of a thing can never be known, only its attributes. For example, the inner reality of the sun is unknown, but it is understood through its attributes, which are heat and essential or fundamental, the other

Aristotelian Substratum of the Bahá'í . The Writings," section 5.6.

²² As distinct from "emanation"—the Manifestation is not a "part" of God, nor does the Manifestation possess the same accidental essence as God, though He can reflect or abrogate manifest the divine qualities inherent in that Divine Essence of the Creator. (See chapter 53 of 'Abdu'l-Bahá's Some Answered Questions.)

must be unknown with regards to its essence and known only with respect to its attributes.

('Abdu'l-Bahá, Some Answered Questions 59:4)

Two points should be noted here. First, the translation of

"reality" is an important

how the latter term is used at

necessary.

and superseded according to the need-exigency and requirement of each succeeding age. ('Abdu'l-Bahá, attribute, Promulgation 97; emphasis added) death of the soul (the substance or Essential attributes are necessary for a hair thing to be what it is, and they cannot be changed, whereas accidental attributes are optional and/or temporary. that For example, being human requires a "rational soul," which, 'Abdu'l-Bahá Unless says, "distinguishes man from the animal" but having red hair or green eyes is "accidental" (Some Answered Questions, 55:5; 55:4). 'Abdu'l-Bahá uses this distinction between essential and accidental attributes to prove the immortality of the human soul: Some hold that the body is the substance and that it subsists by itself, and that the spirit is the accident which subsists through the substance of the body. The truth, however, is that the rational soul which is the substance through which Thus, accidental attribute temporarily ed for living in the phenomenal world. The death of an accidental such as the body, does not imply the (sence) any more than adult-onset loss diminishes our humanity. To understand 'Abdu'l-Bahá's laration, we must bear in mind Aristotle also uses the word "substance" to refer to "essence." indicated otherwise, the latter ly alludes to the makeup of a whereas the former usually refers its ontology as being independent dependent. However, it must be remembered that every substance an essence and every essence is a substance. This meaning of "substance" as "essence" is noted by the translator of 'Abdu'l-Bahá's "Tablet on the of Existence," who states, "The term 'substance' (jawhar) is roughly alent to essence (mahíyya) and (haqíqa), which refer to 'that by a thing is what it is'" (note 2).

the body subsists. If the accident—the body—is destroyed, the a substance—the spirit—remains. both an (Some Answered Questions 66:2) of human beings.

The wording of the new translation of Some Answered Questions makes the Aristotelian connection clear insofar as it explicitly identifies "substance" as "is that which "subsists by itself"—that Himself " is, independently—and "accident" as "substance" that which depends on the substance. inde-

'Abdu'l-Bahá's argument is straightforward: the soul is the substance (essence) of mankind, and the body is an

16 The Journal of Bahá'í Studies 27.1-2 2017

uniqueness of the Manifestations in Their relationship to God—emanating from God's essence and sharing individual in His absolute independence—which Wag- provides a rational basis for accepting "essence" what the Manifestations say as God's convey- Word. Furthermore, a substance is a separate or distinct individual that "essence- "operates according to its own logos" verbal or final cause and for that reason is discussion; also a source of motion and change

when 'Abdu'l-Bahá refers to the human spirit or "rational soul" as substance, He is describing it as independent reality and the essence of

With these two uses in mind, we will find it easier to Bahá'u'lláh's statement that the spiritual aspect of the Manifestations born of the substance of God (Gleanings 27:4). Here, emphasizes both God's absolute independence as well as His divine from which Manifestations This demonstrates the ontological of thing, and general and universal terms have no corresponding For example, there are only dogs, like Barko, Queenie, and ger, and what we call their or "class" is merely a term of nience to lump together apparently similar things. Their alleged es" and "kinds" are nothing but conveniences to facilitate they do not really exist as such.

in itself and sometimes others (Edel 116). A substance exists as a "natural unit," that is, as an integrated whole (Edel 119). Each of these descriptors is valid for God, Who is a natural unit, 'Abdu'l-Bahá refers to the "abundant grace of God's oneness that is shed upon the essences of all created things," which make up the phenomenal world (Selections 266; emphasis added). Furthermore, the Bahá'í Writings assert that phenomenal reality is divided into four classes—mineral, vegetable, animal, and human ('Abdu'l-Bahá, Answered Questions 64:1)—that classes of extant realities each possess distinct essential natures, and that these categories are not man-made constructs. This Bahá'í concept underscores the belief that because human beings are a unique creation, it follows that there may well be a moral imperative or ethical necessity for us to behave in a way appropriate to our essential reality.

Nominalist philosophers deny that essences are ontologically real. In their view, only individual entities are or qualities, indicating,

therefore, that

real, and, therefore, classes of things, essences are real because "[a] non-ex-

essences that allegedly identify a kind istent thing, it is agreed, cannot be

added). The leaves and branches

isted potentially, albeit

invisibly, in the showing the reality of essences is the Answered teaching that mankind's essence does not change during the evolutionary process: "the development of man was always human in type and biological even de- in progression" (Promulgation 358). Elsewhere He explains that "[t]he essence of the species and the innate reality undergo no transformation at all" (Some Answered Questions 47:10). The aforementioned concept of potential is closely related to that of essence.²⁴ Potentials are not physical "things"—like raisins embedded in a bun—that can be identified by empirical scientific analysis. Instead, potentials are virtues or "intelligible realities" that have "no outward form or place and which are not sensible" (‘Abdu'l-Bahá, Paris Questions 60:5).

18 The Journal of Bahá'í Studies 27.1-2 2017

"latent and potential in the world of nature" (‘Abdu'l-Bahá, Promulgation 310; emphasis added). The same is true of a chair, the earth as a whole: "the terrestrial seed" (‘Abdu'l-Bahá, Some Questions 51:4; emphasis added). short, there is more to reality what we can immediately see or discover empirically. This is monstrable in science. No amount of physical analysis of hydrogen ygen atoms can detect their to form water or predict the of water itself, such as its when frozen. These potentials were (‘Abdu'l-Bahá, Some Answered Questions 16:3). However, potentials exist because "[a] non-existent thing, it is not be seen by signs" and cannot come from nothing: "it is impossible that any effect should absolute nothingness" Talks 91; Some Answered Questions 60:5).

final cause. So this chair has who is a carpenter, a matter of wood, a form which is that of and a purpose which is to

serve as a globe was created from the beginning with all its elements, substances, minerals, parts and components but these appeared only gradually" ('Abdu'l-Bahá, Some Answered Questions 51:5). In other words, the potential to form living organisms was already in the earth itself. It is also and only required the right time and conditions to become actualized. In man-made humankind as well, 'Abdu'l-Bahá says, it pertains "our Creator . . . has deposited . . . certain latent and potential virtues. Through education and culture these virtues . . . will become apparent in the human re-limiting the efficiency (Promulgation 90; emphasis added). Building on this concept, Shoghi Effendi states that "man must always try to develop and reveal the qualities that are to be found potentially in him. It is an urge to self-improvement and individual progress" (qtd. in Hornby 479; emphasis added). The development of potentials in

seat" ('Abdu'l-Bahá, Some Questions 80:3).²⁵ The final chair's purpose, without which is no point in having a (design), a material cause to actualize the design, and efficient cause to do the work.²⁶ important that 'Abdu'l-Bahá limit fourfold causality to objects; rather, He explains, to "the existence of. . . (Some Answered Questions 80:3). The final cause influences the the efficient cause by facts it can have. Iron when watered but will not daisies. The final cause is the nature of the water—which only lets take place. This limiting the final cause in action. things have a final cause, purpose, a reason for their existence.

all things including humanity points to another key Bahá'í teaching, namely, that all parts of creation are teleological in nature and therefore have an inner purpose and a goal for which they strive. The teleological, goal-oriented, purposive impulse in all things, including the universe itself, is shown directly in 'Abdu'l-Bahá's validation of Aristotle's concept of fourfold causality: "For the existence of each and every thing depends upon four causes: the efficient cause, the material cause, the formal cause, and the purpose of existence is the revelation of the divine perfections" ('Abdu'l-Bahá, Some Answered Questions 50:4; emphasis added). In other words, the universe is incomplete and lacks purpose without humankind, which gives the universe a purpose, just as "the noblest part of the tree, and the fundamental purpose of its existence, is the fruit" ('Abdu'l-Bahá, Some Answered Questions 50:5).

This includes humankind and verse itself: "If man did universe would be without 25 See Aristotle's Physics and Metaphysics (5.1.1013ab). 26 Fourfold causality harmonizing science and deals with material and whereas religion deals with above all, final causes. As Aristotle indicate, all four for the existence of every it be man-made or natural.

the good of the soul.²⁷ It also education policy in such areas as curriculum development because questions of spiritual education cannot be circumvented or ignored. Likewise, recognizing the primacy of the in our political constitutions will affect our personal and collective scale of values and rights, which in turn societal decisions at every level turn. If, for example, large numbers

27 It is interesting to reflect on the only the good of the body, but also meaning of "harm reduction" in light of our spiritual nature.

20 The Journal of Bahá'í Studies 27.1-2 2017

and stimulated the development of heavenly virtues. (Promulgation 89; emphasis added) is why anthropologists and historians have not found a culture at any stage of development without spiritual and religious beliefs and practices. While Belief or disbelief in immortality affects how we deal with social issues of transcendence, that involve a clash between immediate, short-term solutions and solutions that consider spiritual well-being in this world and the next. For example, while supplying free drugs to addicts they may solve some problems, enabling—and, thereby, perpetuating—a self-destructive behavior suppresses the actualization of other, more important human capacities in this life and also affects the next life. When we reflect on human problems, immortality must be taken into consideration. Other teachings that make no sense without implicitly or explicitly assuming mankind's spiritual nature Marxist-Leninism. are the importance of prayer, the revelation of God's names in human nature ('Abdu'l-Bahá, Paris Talks 26), "Bolshevism and—since God is not a material doctrine; it is

there may be individual exceptions this innate desire for there are no collective or societal ceptions to it. Even militantly revolutions and regimes can be said do no more than replace one kind of religiosity with another—though eventually and invariably fail in endeavor. For example, the French revolutionaries realized that people needed some form of spirituality and devised the militantly atheistic and humanistic cult of reason. The failed at least in part because it not satisfy the intrinsic human nation to transcendence. The same failure was experienced eventually militantly atheistic Presenting a list of similarities tween Marxism and Christianity, Bertrand Russell notes that is not merely a political

29

intercourse to bind the one true God with His creation, . . . no resemblance whatever can exist between the transient and the Eternal, the contingent and the Absolute" (Bahá'u'lláh, Gleanings 27:4). From this it follows that all claims to be ontologically one with God are in error. They are misunderstandings of the intrinsic limits of its human nature, namely, that we cannot transcend our ontological limits. This principle is so strict that according to the Bahá'í Writings, even God cannot discard His infinite nature and become finite: "Know thou of a certainty that the Unseen can in no wise incarnate His Essence and reveal it unto men" (Gleanings 20:1). Moreover, "[f]or God to descend into the conditions of existence would be the greatest of imperfections" ('Abdu'l-Bahá, Some Answered Questions 27:4). In other words, the mystical experience may be experienced as an ontological union, but it is not so in reality.

well-being, both necessary in the phenomenal realm, with the body will eventually be left behind while the spirit will continue to evolve. Of course, the body is not in itself necessarily evil; evil comes into play when, as a result of human choices, the body and the material world are misused. These dualities do not undermine According to the Bahá'í Writings, these dualities are ontologically real and are not merely arbitrary verbal distinctions without objective reference.³⁹ Because these are ontologically real features of human nature, any analysis of human nature that omits them is intrinsically incomplete and is, to that extent, distorted or even false. For example, ontological materialism, the belief that only matter is real, cannot logically admit the existence of the soul and therefore develops an animal nature. Thus, these dualities and their 38 As I shall discuss later, the distinction between these two capacities or natures is the basis of a Bahá'í theodicy for

in their short-term relationship the material world and in the term with respect to their The consumerization of sexuality the modern world also denying the reality of the humanity. These dualities do not the unity of human nature because they are the very constituents human nature itself. If any of dualities were missing, human would be incomplete in some tial way; as necessary human nature, they cannot it. Moreover, these dualities human nature is processual. some people develop qualities that are other unsuited or inappropriate to human nature. The full importance of possessing and the intrinsic goal of actualizing the he potentials bestowed by God becomes and

ties as well as its unique position.

This ongoing constitutive underscores that human nature is teleological. For example, in a letter from the Research Department at the Bahá'í World Centre to the Universal House of Justice, we find the following: "The Bahá'í concept of nature is teleological; that is, certain qualities intended by God 'human nature', and qualities which not accord with these are described 'unnatural'" (letter dated 5 July emphasis added). In other words, kind has an innate goal or purpose, which is to actualize and develop potentials that are in harmony with its "first nature" as created by their "spiritual susceptibilities" (du'l-Bahá, Promulgation 7).

as revealed by Bahá'u'lláh. In words, the right choices are those based on the recognition that "[m] an is, in reality, a spiritual being, only when he lives in the spirit is truly happy. This spiritual longing

clearer when reflecting that this goal is a universal ethical imperative that is valid regardless of time, place, and involves historical circumstance. Here, too, it is evident that bringing mankind's our animal aspects under spiritual control is sets an objective standard by which the ethical merit of behavior can be assessed. Applying this standard is essential to preventing humanity from being misled by technological achievement as a measure of civilization, because it quickly becomes apparent that movements like Nazism used great technological achievements to pursue the lowest moral goals: But what if there is a conflict between For if the spiritual qualities of the soul, open to the breath of the Divine Spirit, are never used, they become atrophied, enfeebled, and at last incapable; whilst the soul's material qualities alone being exercised, they become terribly powerful—and the unhappy, misguided man becomes more savage, more unjust, more vile, more cruel, more malevolent than the lower animals themselves. ('Abdu'l-Bahá, Paris Talks 97) perception to be real. Unlike Sartre's From a Bahá'í perspective, the ethically right choices are those that "naturalize" our divinely created first nature or "natural capacities" what

perception belongs to all men alike" ('Abdu'l-Bahá, Paris Talks 73). Making ethically correct choices recognizing our own spiritual nature and spiritual longings and fitting choices to our true identity, which the only part of us that will endure after physical death. At this point, significance of metaphysics for ethics and human development becomes clear. If humans do not recognize their spiritual nature, it becomes difficult and ultimately impossible to make correct ethical choices. The denial of spirit easily reduces choices to physical advantages or disadvantages.

But what if there is a conflict between short-term physical good and long-term spiritual good? The necessity of making the right choices is also another indicator that human nature is teleological, which is to say that we are obligated to pursue certain divinely intended choices and qualities and to avoid ones that do not reflect our spiritual character. The guidance given by the Manifestations helps us meet these standards, which are objective and therefore do not depend on human perception to be real. Unlike Sartre's atheist existentialism, which claims that all choices are "right" and "natural" as long as we live in "good faith"; statist ethics, which are based on

is good for the state; or utilitarian ethics, which are based on whatever the substances majority decides is good, the Bahá'í Writings teach that ultimately God, matter not humanity, determines moral standards. Ethics are not individually or collectively subjective. one of which—occasionalism—accepts dualism and tries to coordinate BODY-MIND DUALISM the two parts by means of direct divine action. That is, mind and body are connected by God's ongoing intervention: when the mind decides to lift an arm, God causes the arm to rise.⁴⁰ The second solution to the mind-body problem is monism—whether materialistic or idealistic. Both reject mind-body dualism altogether. Idealism showing that it is not constituted by materialistic monists assert that both body and mind are mental in nature.⁴¹ For two apparently incompatible aspects of mind are mental in nature.⁴¹ For materialists, the mind and the brain (which is part of the body) are the same, and that it is not a form of mind-body dualism. Second, the Writings also prioritize these two aspects of human nature in a way that shows how they call "identity theory." Because it is materialist, identity theory also work together and supports the teaching that denies the existence of soul and spirit. denies In the contemporary world, the brain-mind is essentially spiritual nature. Finally, it is also important to understand the identity theory is dominant and is, therefore, the chief rival of Bahá'í solution to the mind-body prob-

Moreover, the sun in the mirror is an expression or manifestation of the actual sun and in that or sense is an attribute of the sun, just Physical as the body is an attribute insofar as of the body's actions are expressions of is the rational soul. In other words, the themselves. relationship between the sun and its mirror image replicates the relationship between the human spirit and the pro-body. Again, there is no interaction brain problem because no such problem marks can exist between a substance and its and, attribute. consequently, provides no answer. In 'Abdu'l-Bahá draws attention to two major difficulties in the identity theory; analysis; from this it follows that the comprehension of meaning requires the intervention of a non-physical process and/or entity. To solve this problem, a non-physical intervenor must be im-accounted as naught" (Some Answered Questions 69:4). In themselves, the there physical sound waves have no emotions or meaning, yet somehow they become very meaningful to listeners even though no amount of scientific is analysis can detect such meaning. The that same problem is even more acute for brain—to decipher the meaning of a text leads only to more physical marks on a computer screen, or electro-chemical "blips" in the brain, squiggly lines on a printout. analysis cannot reveal the meaning of these "ciphers" because the meaning not in the physical marks None of these marks are the meaning; one set of marks has simply been replaced by another. Repeating this process with a different machine or that also can only scan literal merely initiates an infinite regress and, consequently, provides no answer. In principle, therefore, meaning cannot be comprehended by physical from this it follows that the comprehension of meaning requires the intervention of a non-physical process and/or entity. To solve this problem, a non-physical intervenor must be implicitly or explicitly imported to identity theory viable, otherwise would be no escape from the infinite regress of physical processes and no one would be able to understand the meaning of any text.⁴³ Therefore, it difficult to avoid the conclusion that at some point a non-physical

interve-

written texts. The letters, words, and phrases have no meaning in themselves, and physical analysis cannot reveal any.

This raises a crucial question: How can physical brains know the meaning of a text as mundane as "Gone with the Wind" or as metaphoric and laden

36

The Journal of Bahá'í Studies 27.1-2 2017

nor—whether we call it soul, spirit, or mind—must be involved in the comprehension of meaning.

Clearly, the need for such a spiritual intervenor constitutes a major self-contradiction in an identity theory of brain and mind. Indeed, this contradiction throws the tenability of the theory into doubt because it inadvertently resurrects Descartes' substance dualism insofar as it requires both a physical brain and a non-material intervenor. On the other hand, the Bahá'í substance-attribute solution does not suffer from such a self-contradiction because there is no need to import any non-physical intervenors to understand meaning. The human spirit or rational soul takes on that

If the results do not, they will simply be irrational—something [i]f religious belief and doctrine which the Writings clearly reject. The self-evident conclusion is that is at variance with reason, it pro- discursive and non-discursive, both the and trans-rational results ceeds from the limited mind of rational and trans-rational results man and not from God; therefore, complement each other in the quest for spiritual and intellectual evolution. deserving of attention; the heart and intellectual evolution. finds no rest in it, and real faith is impossible. How can man believe that which he knows to be op- posed to reason? Is this possible?

THE CONCEPT OF REASON
IN THE BAHÁ'Í WRITINGS

Can the heart accept that which reason denies? Reason is the first faculty of man and the religion of God is briefly, in harmony with it. (Promulgation 231; emphasis added) discussion, we will consider three main aspects of

In a similar vein, He states, "among the teachings of Bahá'u'lláh is that Bahá'í Writ- religion must be in conformity with rationality science and reason, so that it may influence the hearts of men" (Selections 299. Emphasis added.). Precisely because the "reason is the first faculty of man" that is, the prime distinguishing attribute of the human soul, and because logically the human spirit and the rational soul are one, the heart and other ways of faith knowing are included in mankind's rational nature. Promulgation 326). The same association is found

If human nature were subject to a conflict between the "rational soul" or logical, and other ways of knowing, the Bahá'í apprehends Writings as a whole would have a intelligible

44 The Journal of Bahá'í Studies 27.1-2 2017

and perceptible" (Tablets 115; emphasis added). That is to say, this faculty existence on

To deepen our understanding of the rational soul and human nature, it necessary to examine, at least the Bahá'í concept of reason more closely. To avoid a lengthy reason. In the first place, the ings associate reason and with logic as, for example, in following statement: "In divine we must not depend entirely upon heritage of tradition and former man experience; nay, rather, we exercise reason, analyze and examine the facts presented so confidence will be inspired and attained" ('Abdu'l-Bahá,

the universe was a free, that bestows the gift of

is constitutionally part of the human deduce the spirit. This association of reason and without rationality with logical thought is also long-evident in the assertion that "[i]f religion were contrary to logical reason be then it would cease to be a religion and contradict be merely a tradition" ('Abdu'l-Bahá, attributes of Paris Talks 144).

Furthermore, the "rational soul" can use logical reason to understand insist spiritual and religious issues within not to the epistemological limits of human according nature. For example, reason can prove of the the existence of God, although it can-reason not discover God's essential nature: (Promul-

"The existence of the Divine Being hath been clearly established, on the reason and basis of logical proofs, but the reality non-contradiction of the Godhead is beyond the grasp of that a the mind" ('Abdu'l-Bahá, Selections 46). denial God's existence is provable by reason, sense, but His "reality" or essence is not. same However, 'Abdu'l-Bahá goes even further, saying, "The intellectual proofs insistence of Divinity are based upon observation self-con-

all things. Reason can also "immortality of the spirit" as it, the divinely given "spiritual longings" would have no object and be vain. Indeed, such longings would be deceptive, and that would be the loving and merciful God. 'Abdu'l-Bahá summarizes the teachings on reason and rationality and logic when He asks, "If we insist that such and such a subject is to be reasoned out and tested to the established logical modes of intellect, what is the use of the which God has given man?" (Promulgation 63; emphasis added).

The second attribute of logic is the principle of contradiction. This principle asserts that a statement and its negation or denial cannot both be true in the same sense, at the same time, and under the same circumstances. The Writings demonstrate this principle in the insistence on the oneness of truth; a self-con-

and evidence which constitute decisive argument, logically proving the reality of Divinity, the effulgence of mercy, the certainty of inspiration and immortality of the spirit" (Promulgation 326; emphasis added). Reason can not only prove the existence of God; it can also discover the divine attributes as articulated and exemplified by the Manifestation. If It cannot discover these attributes by itself, but it can deduce why the divine attributes must logically exist. For example, because God is not compelled by anything outside Himself, creating reasoning.

The Bahá'í Philosophy of Human Nature

45

'Abdu'l-Bahá seeks to avoid contradictions, and in doing so, He sets the example for resolving contradictions where possible. Shoghi Effendi reaffirms this theme, saying, "Truth may, in covering different subjects, appear to be contradictory, and yet it is all one if you carry the thought through to the end," a principle he emphasizes by asserting that "[t]ruth is one when it is independently investigated, it does not accept division" (qtd. in Hornby 476; Japan 35).

tradictory truth cannot possibly exist because it simultaneously makes opposite claims that cancel each other out. For example, 'Abdu'l-Bahá declares that "truth or reality is simple; it is not divisible" and is one, although its be very different" (Promulgation Paris Talks 128; emphasis added). contradictions appear, it is to look deeper because differences in the expressions of not necessarily imply logical contradictions in the underlying traditional interpretations based plicable and irrational beliefs, the foundations of the religion God would rest upon an illogical proposition which no mind could ever conceive, and how could the mind be required to believe a thing which it cannot conceive? Such a thing could not be grasped by human reason—how much less be clothed in an intelligible but would remain sheer fancy.

<p>'Abdu'l-Bahá's approach to rationally resolving contradictions is exemplified in His explication of the Christian doctrine of the Trinity, which He is regards as irrational in its traditional interpretation: "The reality of the Divinity... admits of no division and a sub-multiplicity for division and multiplicity are among the characteristics of created and hence contingent things... For that divine reality to descend into stations and degrees would be tantamount to deficiency, contrary to perfection and utterly impossible" (Some Answered Questions, 27: 2–3). In other words, 'Abdu'l-Bahá finds the traditional understanding of the Trinity to be self-contradictory and He therefore replaces it with a non-self-contradictory explanation (Some Answered Questions, 27: 6–10) showing thereby that He views contradictions as problematic and undesirable in our thinking sense, processes, even on spiritual matters. His insistence on logical consistency—which requires the elimination of contradictions—is evident in His Nagarjuna declaration that were we to accept principle</p>	<p>(Some Answered Questions 27:9; emphasis added)</p> <p>Another example of classical logic 'Abdu'l-Bahá's argument regarding the immortality of the human soul, which is that a thing cannot be stance and an attribute at the time. Logical consistency, whether it be propositional agreement and/or complementarity or neutrality, an essential principle in the Writings. The third attribute of reason logic is universality. In other the principle of is universally applied by all beings and, indeed, all living My pet ducks, Jack and Jill, know Dozer, my neighbor's big yappy either outside the front gate or the front gate and cannot be both the same time and in the same and they make their decision to outside for a stroll accordingly. humans who deny the principle of non-contradiction—such as na and Hegel—still obey this</p>
---	--

in their daily lives. They know that either they have eaten lunch or have not eaten lunch but not both in the that same sense at the same time. Thus, Answered this principle is universal—at least in because we actual practice—and that makes it an essential attribute of human nature or the the rational soul. Because all humans the have at least the capacity for reasoning, it can be one of the foundation stones of the unification of mankind soul because deliberations will be based foundation on the common ground of discursive reasoning. Bahá'u'lláh's and 'Abdu'l-Bahá's statements aligning reason with noted—albeit the essence of humankind have far-reaching implications, especially for though the goal of unifying humankind into articulated one global commonwealth. Because rationality is a universal characteristic treating of human nature, it applies to people not across cultures, historical epochs, and example, geographical locations. Superficial appearances notwithstanding, there reasonableness is a core of rationality within all foundation of cultures, although the vicissitudes of revelation.

matrix of the world," which means that we have always possessed the distinguishing attribute of man, is, the rational soul (Some Questions 49:8). Precisely recognize that our ancestors were rational, we are able to interpret artifacts they left behind. Because rational soul is the common feature joining all human beings into one species, both the possession of a and its rational nature are stones of the unified global world order that Bahá'u'lláh came to establish. Finally, it should be it briefly—that reason has other, related uses in the Writings, none that contradict the ideas related above. One meaning of reason is "appropriateness," that is, one kind of thing as befits it and as if it were another—for not treating a human being like an animal.⁴⁷ The concept of as appropriateness is the the doctrine of progressive

historical circumstances may shape, laws or even distort, the development to of these cultures in various ways. framed, Its universality makes rationality a to connecting principle that transcends fact differences among all cultures and is, peo- therefore, a basis for positive global dialogue and the unified world order there- of Bahá'u'lláh. Even our evolutionary particular ancestors are included in the circle of reason. 'Abdu'l-Bahá tells us that too dif- "man remained a distinct essence— rational that is, the human species—from the 'Abdu'l-Bahá's Paris beginning of his formation in the The Bahá'í Philosophy of Human Nature

'Abdu'l-Bahá says, "All religious conform to reason, and are suited the people for whom they are and for the age in which they are be obeyed" (Paris Talks 141). The that revelations are "suited to the ple for whom they are framed" means that they are appropriate—and, fore, reasonable—for that 47 Their essential natures are ferent because the latter has no soul. See p. 122 of Talks. 47

time and those specific circumstances. intrinsically Comparing religious cycles to the life roles cycle of a tree, He further elaborates the by stating that "[i]t is not reason- from able that man should hold to the old free- tree, claiming that its life forces are responsi- undiminished" (Promulgation 142). Each of Moreover, if a thought or action is appropriate and reasonable, it is also just. This principle underlies the fol- Bahá'í lowing assertion of 'Abdu'l-Bahá: Indeed,

intentionality, mankind's privileged place in creation, the of the body and the rational soul, universality of free will, freedom nature, the foundations of ethical dom, individual and social bility, and the origin of evil. these shall be examined in turn. The existence of individual free will is an essential feature of the philosophy of human nature.

"Know that justice consists in rendering to each his due (Some Answered toward Questions 79:1). The third sense of evolution reason, or being reasonable, refers to humans having a purpose. Actions that have no their purpose are simply arbitrary and random and therefore are not informed or ethics shaped by reason. This is one of the ethical aspects of purpose that seems appropriate to Shoghi Effendi's reference to a "rational God" (World Order 112). Bahá'u'lláh tells us that God created us accidentally for a purpose: "the purpose of creation . . . is the knowledge of Him Who is with the Eternal Truth" (Kitáb-i-Aqdas n. 23). Creation is not "accidental" or fortuitous but is informed by a plan and purpose ('Abdu'l-Bahá, Some Answered Questions 47:5). It is evident that all of these meanings of the terms "reason" and "reasonableness" are compatible with the logical principle of non-contradiction. FREE WILL

the work of Manifestations in guiding individuals and societies their spiritual and material would be completely futile if were unable to choose to alter ways of thinking, beliefs, and actions. Indeed, without free will, per se are not possible because behavior has at least two characteristics: it must be conscious and intentional. No ethical act—whether good or bad—can be performed or inadvertently (without knowledge or forethought). That is to say, without choice and without intention on this choice there is no ethical act. To claim otherwise would be equivalent to asserting that a rockslide acted ethically by missing a doe and a fawn. No one can claim to have acted ethically if, due to a sudden unconscious involuntary spasm in his arm while driving, he avoided hitting a pedestrian who had slipped in front of his car. No conscious choice and intention to act on this choice took place; therefore, it is not an ethical act. A good event

plan of God. Therefore, depend upon present your own reason and judgment and adhere to the outcome of your own investigation" (Promulgation 292). Having "responsibility in the creative plan of God"—which is to say, responsibility for the advancement of humankind—requires all persons nature brings with it the capacity to do to make the correct ethical choices in evil if we so desire. According to the their own lives (Promulgation 292). In Writings, evil—not be to be confused other words, we must be aware that with unconscious and unintentional we not only create our own second natural disasters or accidents—finds nature with our choices but also bear some responsibility for the spiritual good progress of mankind: "All men thing is have been created to carry forward Glean- an ever-advancing civilization" (Bahá'u'lláh, Gleanings 109:2). In wrongdoing short, our responsibilities in using main- free will stretch beyond ourselves. human It is noteworthy that 'Abdu'l-Bahá humans exhorts us to use our "own reason and ef- judgment" in regard to ethical choices. choice In his two-volume study, *The Idea of Freedom*, Mortimer Adler outlines humankind regardless of their level of moral and intellectual opment. In short, free will is cally and, therefore, universally ent in human nature and serves as a basis for the unification of The existence of free will in its source in humanity: "Every thing is of God, and every evil from yourselves" (Bahá'u'lláh, ings 77:1). Despite our wishes to contrary, the capacity for must exist if free will is to be tained as a meaningful aspect of nature. Free will is not free if can only do good—they would, in fect, become robots without any at all. Free will being an inherent man attribute, were it to be

abrogated

the theory of natural freedom, which states that free will is "(i) inherent in all men, (ii) regardless of the circumstances under which they live and (iii) without regard to any state of mind or character which they may or may not acquire" (149). The Bahá'í Writings agree with these three conditions. Free will is an essential component of human nature, and as such, it can

52

The Journal of Bahá'í Studies 27.1-2 2017

require God to remake the entire cosmic order and thus implicitly asserts that humans could create a better moral universe than God.

also evident in 'Abdu'l-Bahá's praise of an HUMAN NATURE AND CHARACTER over an educated child of bad character. According to 'Abdu'l-Bahá, "Character is the true criterion of humanity. Anyone who possesses a good character, who has faith in God and is firm, whose actions are good, whose speech is good—that one is accepted at the threshold of God" (Promulgation 427; emphasis added). In other crite-

or were God to rescue mankind from every wicked choice—which would, effect abolish free will—human would, by definition, cease to be man. For this reason, the demand God should prevent evil in some is an inadvertent wish that God abolish humanity as the unique or advance guard of cosmic. Consequently, this demand would

cause the former is of benefit mankind (Selections 135). The history of the twentieth century is with examples of how much damage intelligent and educated persons bad character can do.

In The Secret of Divine 'Abdu'l-Bahá points out another

words, attributes like race, nationality, character, social class, wealth, talent, family history and connections, as well as intelligence are not necessarily instrumental in having a good character. Only the struggle to understand the attributes of God, coupled with obedience to His commands—reciprocal undertakings on our part—can result in our spiritual ascent. Essential to the Bahá'í view of human nature is that faith in God is a requirement for good character. One reason for this is found in Bahá'u'lláh's statement that disbelief in God is an act of treachery because it demonstrates colossal ingratitude toward the Source of creation.⁵¹ In the acquired character" (Some Answered Questions 57:2). Innate character seems to refer to intelligence and other attributes is a gateway for

rion for recognizing good which is that it should be based "reason and knowledge and true eration" (59). It is noteworthy reason is counted among the butes of good character. of course, does not necessarily "book knowledge" but rather edge of God's presence in the Reason is necessary to think using our knowledge of God and world. Irrationality is not with good character. According to 'Abdu'l-Bahá, character of each person has a fold structure: "the innate ter, the inherited character, and

ing of blame. ('Abdu'l-Bahá, Some ter—something that must be earned.
Answered Questions 57:10) We must not confuse equality of val-

uation with sameness of endowments.

In other words, we have the freedom to put even our potentially negative attributes to a personally and socially good use. The same is true of someone who puts extreme ambition to positive use, not by becoming avaricious, but by struggling to create a more just distribution of wealth. In short, by good applications, a potential negative can be sublimated into a positive. We are born pure—with no manifested in

attribute that is negative in and of itself. As 'Abdu'l-Bahá says, "Although

resur-

all existent beings are in their very form,

nature created in ranks or degrees, for capacities are various, nevertheless every individual is born holy and pure,

and only thereafter may he become defiled" (Selections 190).

From the Bahá'í teachings about character, there are four things to

or

It does not simply develop by itself.

Teaching good character is, essential-

humanity.

This is easy to illustrate. Whose life is more worthy—the highly intelligent and multiply-gifted criminal or the person with meager endowments practicing good will toward all?

Third, character formation is the key to the construction of the new world order. If character is not changed—that is, if positive

are not actualized and other, potentially negative ones are

ex-

full intellectual and spiritual capacities existence, but also for their "development

56 The Journal of Bahá'í Studies 27.1-2 2017

and growth." A story from my youth individuals versus the rights and good illustrates this fact. In 1968, I worked of society. The need for this balance is as an orderly in a German Catholic recognized in the following statement charity mental institution for "hopeless" cases. (This was before the drug authority by the Universal House of Justice: "The successful exercise of revolution in psychiatry.) I asked one in the Bahá'í community implies the of the nuns I had befriended, Sister recognition of separate but mutually Anna, what was the point of keeping reinforcing rights and responsibilities between the institutions and the such sad cases. Her answer illustrates friends in general, a recognition that in turn the truth of 'Abdu'l-Bahá's words. She welcomes the need for cooperation between these two interactive forces of is an opportunity for you and me to develop our humanity (Menschlichkeit)." society" (letter dated 19 May 1994 to In service to others, we develop and the National Spiritual Assembly of the United States). Establishing "mutually reinforcing rights and responsibilities" requires the recognition and harmonization of the legitimate interests and responsibilities of both individuals and collectives. The practical implications of the social aspect of human nature do not become apparent until we reflect on putting them into practice. For example, the Bahá'í teachings make it logically inconsistent to permit any interpretation of the importance of balancing individual and collective rights and responsibilities prevents us from interpreting imbalance between the rights and favoring the call to be "as one soul" as

sponsibilities of the individual and those of the community, whether it be a nation, a tribe, or even a service club like the Rotary. Individual rights are preserved by principles such as the independent investigation of truth, consultation, and the universal participation in the electoral process of the administrative order. These teachings counter the tendency to see individuals as nothing more than instruments of the state or some other collective. Individual value is not conferred just from the "outside." However, at the same time, the Bahá'í Writings clearly oppose atomic individualism, which overemphasizes the rights of

collectivism in some way (Gleanings 122:1). In my understanding, this is a call for a teleological unity, not ontological unity. A teleological unity is a unity of purpose that action but preserves diversity, an ontological unity requires by removing all individual distinctions, eliminating diversity in create both unity and uniformity. a concept runs against one of main themes of the Bahá'í Writings.

The Bahá'í Philosophy of Human Nature

CONCLUSION

As we have observed, the Bahá'í Writings have a logically coherent

57

philosophy of human nature. This philosophy is a vertically integrated existentialism, whole with its foundations in metaphysics and ontology and its apex in a divinely guided relationship to God.

Second, vis-à-vis modern philosophies such as atheistic postmodernism, and most forms of secular humanism and Marxism, the Bahá'í philosophy of human nature

In between are texts on the structure and constituent aspects of human nature, its innate capacities, its position and role in the universe, its destiny, does
